

WHITEPAPER

WWW.ASTROEROW.IO

INTRODUCTION

AstroGrow aims to build an ecosystem that will connect the Metaverse with Universe, Through the strategy of Reflection, AstroGrow will reward users holding AstroGrow tokens (\$ATG) in their wallet. Holders of \$ATG token will earn passive income in the form of \$BUSD, which will consist of 1 percent of every trading transaction, whether it is a sale or a purchase, and the transaction will be redistributed automatically to \$ATG holders. Investors will benefit through the valuable features of \$ATG and the ever-growing ecosystem to boost adoption with a long-term vision. AstroGrow will enable users to get financial stability and accomplish asset-building goals for long-term success.

AstroGrow has its own NFT marketplace lined up, where users will be able to mint, sell and buy NFTs through the AstroGrow marketplace. You may rely on the launch of a fully functional NFT marketplace later this year, as our team has vast experience in the development and security of NFTs.

NFTS

In the AstroGrow NFT Marketplace, non-fungible tokens (NFTs) will be traded. NFTs are unique tokens containing vital information. The NFTs that will be exchanged on AstroGrow will possess particular characteristics. Since their value is mostly determined by market and demand, they can be bought and sold in the marketplace of AstroGrow just like other physical forms of art. The unique data format of NFTs makes verification and validation of ownership and the transfer of tokens between owners straightforward.

NFT MARKETPLACE

The NFT marketplace facilitates the purchase and sale of digital assets ranging from art to music to entire virtual worlds. It will be possible for users, investors, and traders from all around the world to trade their artworks.

To store NFTs, a user or investor must register on the platform and download a digital wallet. Then, users can create assets by uploading content to the AstroGrow NFT Platform to display their work. The users will transact in \$ATG tokens while using the marketplace.

NFT MARKET

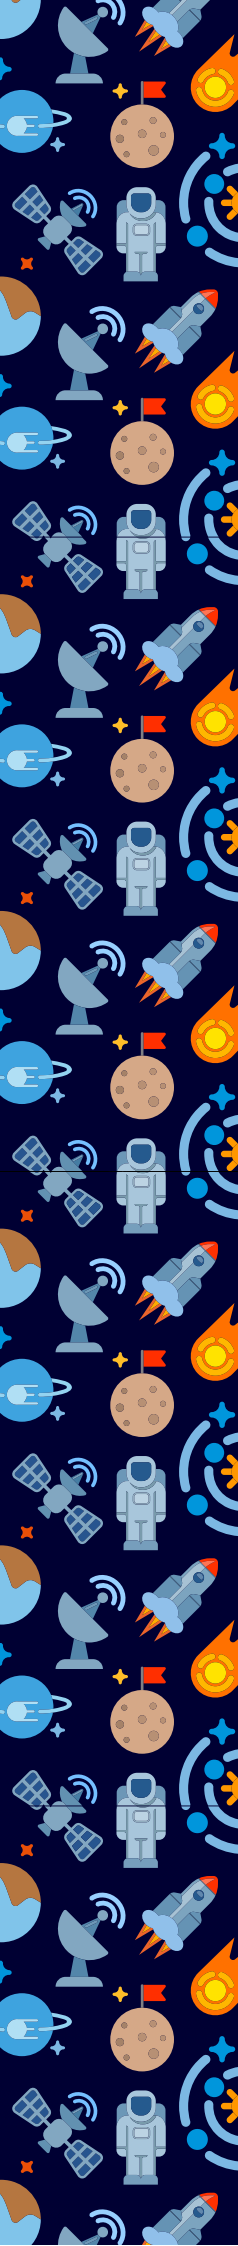

A digital item that replicates physical components such as art, music, in-game currencies, and films is known as an NFT. They're regularly bought and sold online, often in combination with other cryptocurrencies, and they're usually encrypted with the same software as most other cryptocurrencies. Even though NFTs have been around since 2014, they are becoming more popular as a way to buy and sell digital art. Since November 2017, \$174 million has been spent on non-financial transactions. The NFT market is growing at a faster rate, and it is doubling every quarter. NFT sales increased to over \$2.5 billion in the second quarter of 2020, up from \$13.7 million in the first half of 2020, according to data from the NFT Marketplaces. These NFTs can be in the form of digital images, films, or other in-game items that are traded on one of the many NFT marketplaces.

On the blockchain, the makers or owners of digital artworks and the creators or owners are listed.

According to NonFungible.com, buyers have surpassed sellers on the Ethereum blockchain since March. This varies depending on the type of transaction. In the first half of 2021, DappRadar predicts \$2.5 billion in sales across many blockchains. NonFungible.com has eradicated about \$8 billion in "DeFi" NFTs with a \$1.3 billion investment. Both firms keep track of sales that happen entirely "off-chain." Many large non-blockchain transactions take place "off-chain," necessitating manual data entry. In March, Christie's sold a digital shot for \$69.3 million. Then, at Sotheby's, a "CryptoPunk" painting sold for \$11.8 million. In June, there were 246,000 buyers and sellers on the NBA's Top Shot marketplace, down from 403,000 in March. The cost of a Top Shot "moment" dropped to \$27 in June from \$182 in February. While the popularity of NFTs waned, others grew in favor.

10,000 non-functional digital ape tokens make up the Bored Ape Yacht Club. An ape sold for \$3,600 on OpenSea on July 1, up from \$215 in April. According to Yuga Labs, the club made over \$61 million in revenue.

According to a new prediction from non-fungible token data provider Nonfungible.com, non-fungible token sales will reach \$17 billion in 2021. NFT trading reached \$17.6 billion last year, up 21,000 percent from \$82 million in 2020, according to the report, which was conducted in collaboration with BNP Paribas-owned research group L'Atelier. NFTs are fungible assets that allow the blockchain to determine who owns a particular digital asset, such as a work of art or a video game character. Last year, they had a significant impact on public consciousness. In addition, the industry is expected to grow in 2022. From \$14.02 billion in 2021 to \$21.33 billion in 2022, the global market for non-fungible tokens is predicted to develop at a 52.1 percent compound annual growth rate (CAGR).

OPPORTUNITIES

The possibility of profitably selling art generated with NFTs is an obvious benefit. Several Formula One teams are now selling replicas of their race cars as souvenirs. If your NFT becomes popular, you may be eligible for royalties. No prior knowledge of blockchain technology is required, and there are several instructions for creating your own NFT. Depending on the market, you can convert an existing piece of art to an NFT in a few simple steps. Businesses can, of course, hire a team of artists and engineers to best represent their brand.

The lack of interest in non-financial instruments concerns everyone (NFTs). Nonetheless, the solution is far simpler. At a Christie's auction, a Beeple NFT sold for USD 69 million. NBA Top Shots are NFT-based trading cards with a retail value of around USD 200,000. Several NBA NFTs were initially sold for as cheap as \$9.

Affordable prices? Almost certainly not. While the costs appear to be excessive, they serve as a clear reminder of how important NFTs are. Even if prices do not continue as high as they are now, there will always be a market for digital art treasures. Non-fungible tokens can help businesses interact with crypto enthusiasts.

OBJECTIVES

The objectives of the AstroGrow platform are focused on consumers and investors to make the most out of an all-in-one ecosystem. Through the reflection function of \$ATG, the users and the investors will all be rewarded in \$BUSD.

All in all, the objective is definitely to provide maximum advantages to the users and investors through the ecosystem of AstroGrow. AstroGrow hopes to utilize its token to unlock the power of ever Defi by utilizing the Binance Smart Chain. To promote growth for everybody, we aim to build bridges between traditional banking and digital markets, enabling the future of finance to take shape.

CORE VALUES

The core purpose of AstroGrow is to make the users and investors strong in their financial positions and enable them to make profitable decisions, which would help them to grow and build their assets. With reflection, AstroGrow impels people to learn about investing in crypto and earn profit from the platform of AstroGrow. By providing value and power to the users through their assets and investments, AstroGrow helps the users in making their financial decision to invest in \$ATG which will appreciate...

...long term powered by an ecosystem of products and through reflection in \$BUSD on both Buy and Sell transactions Not only this, but Astro Grow also focuses on the expansion of blockchain technology in the world and through its \$ATG token, it aims to make the blockchain part of the portfolio of every single person in the world.

ECOSYSTEM

Based on the most robust network, Binance Smart Chain, AstroGrow's ecosystem is far more expansive and robust. The reflection function is our primary motive force. For widespread adoption, we are adamant that the \$AGT token will need to be integrated into a diverse ecosystem of products. As a result of our intention to develop both before and after launch, users will enjoy quality and value.

The ecosystem is based on Binance smart chain which is a blockchain network designed to run apps based on smart contracts. BSC operates concurrently with Binance's native Binance Chain (BC), giving customers the best of both worlds: the huge transaction capacity of BC and the smart contract features of BSC.

ASTROBANK

The Bank for \$ATG holders.

AstroBank is coming soon! Decentralized investment platform for \$ATG holders to maximize profits using features such as Governance, Staking, Farming, Lending, an all-in-one application powered by smart contracts for \$ATG holders.

Operate as a community-focused and community driven bank, fully decentralized in every sense of the world. AstroBank will maximize profits by decreasing volatility and increase positive price pressure in digital asset holdings.

Lower the barrier for entry to more advanced financial ecosystem. Vote on active proposals along with other \$ATG holders. As more people, especially institutional investors, become aware of the potential profitability of AstroBank, AstroBank will rapidly become a passive income generating approach that entails keeping or locking funds in a wallet. Grow your financial portfolio with AstroBank.

LIQUIDITY POOL

1% of each Buy/Transfer/Sell transaction is automatically deposited into a locked liquidity pool as \$ATG and \$BNB, hence providing ongoing liquidity to enhance floor price. Additionally, increased liquidity facilitates greater accessibility for larger investors and traders. Those who distribute liquidity are also rewarded with LP tokens. Typically, clients settle their balances on DEX, which are subsequently assigned to liquidity providers. This is established by how much or how much of the pool they own.

It is self-contained, and we intend to give the owners a dual-purpose establishment. After establishing a stable price, the contract collects tokens from individuals who sell or buy them and deposit them in the form of Lp to improve the overall liquidity.

BURNING

1 percent of every transaction is turned into BNB and held in our contract. When buyback is activated, \$ATG is purchased from exchanges and permanently removed from circulation. This produces additional \$BUSD incentives and raises the floor price.

Burns are required in some situations but not in others. While continuous burn on a single protocol is convenient during the early stages, it means that the burn cannot be restricted or managed in any way.

Controlled burns encouraged as a result of team achievements help to keep the community informed and responding to fresh knowledge. AstroGrow will also manage the burn, which will be overseen by a team of specialists.

Professionals will strive to preserve and enhance a healthy balance to assist the general public and ensure their well-being.

Other feasible alternatives include marketing and monitoring the conditions and proportions of the programmed burn. AstroGrow's innovative and modern approach aims to adopt a long-term burn strategy that is both beneficial and enjoyable for those who engage. Aside from that, manual burns can be used to reward and educate community members. The conditions of manual burning, as well as the amount of manual burning, are made public and regularly monitored. Following each transaction, AstroGrow Tokens will be burned indefinitely. The entire number of coins destroyed is posted on the readout on our website, providing greater transparency in estimating the current circulating supply at any one time.

REFLECTION

AstroGrow is focusing on rewarding holders through reflection. Reflection tokens refer to any crypto-asset that rewards its holders by adding additional crypto to their wallets.

The objective of other DeFi investing mechanisms, like staking and yield farming, is to earn additional crypto. Simply hold \$ATG tokens in your wallet to generate \$BUSD passive income. 1% of every Buy/Transfer/Sell transaction is automatically redistributed to \$ATG holders.

dAPP & SWAP

AstroGrow has its decentralized application which helps the users to perform several actions right from their phones. dApp is a form of distributed open-source software application that operates on a peer-to-peer (P2P) blockchain network as opposed to a single computer. Users can swap their funds and assets using the dApp of AstroGrow. A Swap is a process of swapping one cryptocurrency for the equivalent value of another.. AstroGrow has a Dashboard for the dApp and Swap interface. Dashboard with the newest metrics, token burn counter, market cap evaluation, investment calculators, and more to assist investors! With the built-in swap interface and auto-slippage option, tokens may be exchanged rapidly and without hassle. Instantaneously view and claim your earnings. Dashboard and Swap will be operational before the launch of exchanges.

ASTRO WALLET

AstroGrow plans to develop a multi-crypto wallet for users where they will be able to store their assets in a secure place. Astro wallet is a cryptocurrency storage and retrieval application that allows users to store and retrieve their digital assets.

In the same way that conventional currency is used, users do not need a wallet to spend their cash, but keeping it all in one location is undoubtedly beneficial. Users will be able to immediately purchase, sell, and stake \$AGT tokens through AstroWallet. AstroWallet will support several currencies, has a streamlined user interface, and is available in both desktop and mobile versions.
